Table C & Table A calculator

The extension can be used to do the required championships calculations.

Through the start list you can access the **Setup** page. This page let you choose where to pull the data from and where to save the end result.

There are 4 modes:

- Table C to Points
- Table A – 1st round
- Table A – 2nd round
- Process Custom Fields

As a additional setting you can change about the the amount of penalties the combination gets when they don't finish the course in the first or second round.

This extension also reads and writes custom fields.

Table A – 2nd round and Process Custom Fields reads the championship field, and write the result back to championship_after. This can be used to display on the scoreboards the current score.

There is also a **Copy** page for the custom fields, this allows you to quickly copy current championship score to the next competition. You can repeat this step for round 3B if needed, the process Custom Fields methods understands round A en B.

Start custom field names;

- championship
- championship_after

Championship contains the score before the rider has started that round

Championship_after contains the score after the rider has finished that round
